Subject: RE: Animas Release Response Coordination/Updates

Update from CDPHE on other DW Systems.

Glacier Club PWS Update (Tamarron - north of Hermosa, CO)

Rob Cribbs also spoke with Bill Kroker of the Glacier Club PWS (CO134840) today. Upon our original notification call, they closed their SWTP intakes and the headgate for irrigation water to the golf course. There was no impact to the SWTP. They still have the intake and headgate closed and will do another observation at the river today. They have substantial finished water storage that they are using to keep the distribution system pressurized.

Animas Water Company PWS Update (Hermosa, CO)

Rob Cribbs spoke with John Ott at the Animas Water Company PWS (CO134020) located in Hermosa, CO (North of Durango) along the Animas River. They are a groundwater system that also has an open pending evaluation underway to determine if wells are impacted by surface water. They reported that they did witness the impact to the river, however, they also report that the river is now clearing up. They have not seen an impact to the quality of their well water, and understand that there may be a delay in impact depending on the nature of the aquifer and time of travel to the wells. They are closely monitoring their water quality and will report any changes.
